

SauceDemo – Manual Testing Test Plan

1. Project Overview

This document defines the test plan for the manual testing of the SauceDemo web application.

The purpose of this testing project is to verify that the application's major functionalities work as expected and to identify functional, usability, validation, and other potential defects.

The testing will cover the complete user journey from login to successful order completion.

2. Application Under Test

Application: SauceDemo

Application Type: E-commerce Web Application

Testing Type: Manual Testing

Testing Approach: Functional and Exploratory Testing

3. Testing Objectives

The main objectives of this testing project are:

- Verify that users can successfully log in and log out.
 - Verify that products are displayed correctly.
 - Verify product sorting and navigation functionality.
 - Verify that users can add and remove products from the shopping cart.
 - Verify that cart information is displayed correctly.
 - Verify the checkout process.
 - Verify required-field validations.
 - Verify order summary and price calculations.
 - Verify successful order completion.
 - Identify and document defects.
 - Verify that the application behaves correctly for invalid and unexpected inputs.
-

4. Scope of Testing

4.1 In Scope

The following modules and functionalities will be tested:

Login

- Valid login
- Invalid login
- Empty fields
- Locked user
- Error messages
- Logout

Products

- Product listing
- Product information
- Product details
- Product sorting
- Add to cart
- Remove from cart

Shopping Cart

- Cart navigation
- Added products
- Product quantity
- Product removal
- Continue shopping
- Checkout navigation

Checkout

- Customer information
- Required-field validation
- Invalid input validation
- Checkout navigation
- Order summary
- Price calculation
- Cancel checkout
- Finish order

Order Completion

- Successful order submission

- Confirmation message
 - Confirmation page
 - Return to products
-

5. Out of Scope

The following areas are outside the scope of this manual testing project:

- Performance testing
 - Load testing
 - Security penetration testing
 - Database testing
 - API testing
 - Source code testing
 - Mobile application testing
 - Cross-browser compatibility testing beyond the selected test environment
-

6. Testing Types

The following testing techniques will be used:

- Functional Testing
 - Positive Testing
 - Negative Testing
 - Boundary Value Analysis
 - Equivalence Partitioning
 - Validation Testing
 - Regression Testing
 - Smoke Testing
 - Sanity Testing
 - Exploratory Testing
 - Usability Testing
-

7. Test Environment

Operating System: Windows

Browser: Google Chrome

Testing Type: Web Application

Test Environment: Public SauceDemo application

The exact browser version and operating system details will be recorded during test execution where required.

8. Test Data

Test data will include:

- Valid login credentials
 - Invalid login credentials
 - Empty input values
 - Invalid input values
 - Customer names
 - Postal codes
 - Product selections
 - Multiple products
 - Boundary and special-character inputs where applicable
-

9. Entry Criteria

Testing will begin when:

- The application is accessible.
 - The major application modules are available.
 - Required test credentials are available.
 - The test environment is ready.
-

10. Exit Criteria

Testing will be considered complete when:

- All planned test cases have been executed.
 - Failed test cases have been investigated.
 - Identified defects have been documented.
 - Retesting has been performed where applicable.
 - Regression testing has been completed for relevant areas.
 - A final test summary report has been prepared.
-

11. Defect Management

Any identified defects will be documented with:

- Defect ID
 - Defect title
 - Module
 - Environment
 - Preconditions
 - Steps to reproduce
 - Test data
 - Expected result
 - Actual result
 - Severity
 - Priority
 - Evidence
 - Defect status
-

12. Deliverables

The following deliverables will be produced:

1. Test Plan
 2. Test Scenarios
 3. Test Cases
 4. Test Execution Report
 5. Defect Reports
 6. Screenshots/Evidence
 7. Test Summary Report
-

13. Risks and Assumptions

Risks

- The public test environment may become temporarily unavailable.
- Application behavior may change during the testing period.
- Some defects may be environment-specific.

Assumptions

- The application is available during testing.
- Test credentials provided by the application are valid.
- Testing will be performed using the selected environment.

- Requirements are derived from the application's observed behavior.
-

14. Test Approach

Testing will follow a structured approach:

Application Exploration → Test Scenario Identification → Test Case Design → Test Execution → Defect Reporting → Retesting → Regression Testing → Test Summary

The testing will focus on both expected user workflows and unexpected or invalid user behavior.
